DOUBLE STRENGTH OPACITY

LiveType
Titling
Glows, Blurs, Rays or Streaks

If the glow or blurred text isn't distinct enough in LiveType, simply break the rules of math and enter an Opacity number over 100%!

While it doesn't seem particularly logical, LiveType allows many entry boxes to take values higher than those that can be entered using the sliders.

Particularly useful is the ability to enter opacity values over 100%. While it doesn't seem that it obeys the rules my math teacher taught me, it is useful if the glow or shadow isn't intense enough when blurred. For example, the glow on this title is almost invisible with Glow Blur at 20 and Glow Opacity at 100%.

But if we boost the Glow Opacity to 300% by entering it manually into the entry box; the glow becomes very visible.
